## CLAIMS

- A method for the production of metal
   coated steel products, comprising the steps of :
  - providing a steel product with a metallic coating,
  - adding an additional metallic element to said coating,
     followed by a step of
  - subjecting said product to a thermal treatment,
- 10 characterized in that :

25

30

- prior to the addition of said additional element, said product is subjected to a plasma treatment, for cleaning and activating the surface of said coating,
- said additional element is added through a physical
   vapour deposition technique,
  - said thermal treatment is applied by directing high energy infra red radiation towards the outer surface of said coating.
- 2. The method according to claim 1, wherein
  20 said metallic coating is chosen from the group consisting of: a Zn-coating, an Al-coating, a Zn-Al coating.
  - 3. The method according to claim 1 or 2, wherein said additional metallic element is Mg, and wherein said Mg is added through sputtering or evaporation under low pressure.
  - 4. The method according to any one of claims 1 to 3, wherein said plasma treatment is a Dielectric Barrier Discharge (DBD) plasma treatment, taking place at a pressure of between 0.1bar and 1bar, under an atmosphere consisting of  $N_2$  or of a mixture of  $N_2$  and  $H_2$ .
  - 5. The method according to any one of claims 1 to 3, wherein said plasma treatment takes place under vacuum.

WO 2005/028695 PCT/EP2004/010673

9

- 6. The method according to any one of claims 1 to 5, wherein said thermal treatment is given under an inert atmosphere.
- The method according to any one of claims
   1 to 5, wherein said thermal treatment is given under air.
  - The method according to any one of claims
     to 7, wherein said product is a steel sheet.
- 9. The method according to claim 8, wherein said infra red radiation is directed towards one side of 10 said sheet, during a time interval between 5 and 10 s.
  - 10. The method according to claim 8, wherein said infra red radiation is directed towards both sides of said sheet, during a time interval between 3 and 8s.
- 11. The method according to any one of the 15 preceding claims, wherein the energy density of said infra red radiation is at least  $400 \text{kW/m}^2$ .
  - 12. Apparatus for performing the method of any one of claims 1 to 11, comprising:
- a means for performing a plasma treatment on a metal
   coated product,
  - a means for adding an additional element to said coating by using a physical vapour deposition technique,
- a means for directing high energy infra red radiation towards the outer surface of said coating, after adding
   said additional element.
